

Ms Lissa Rowan

EDUCATION, COMMUNITIES & ORGANISATIONAL
DEVELOPMENT DEMOCRATIC SERVICES

Moray Council

21/08/2020

Dear Ms Rowan

REFERENCES LR/LR 240

My input with regards to planning
applications 20/00195/PPA

was to express my
wish that all wildlife flora & fauna
on each site be fully protected to law
that is unbalanced but wish ~~to~~ to
make some mitigation

Prior to lockdown

it appeared that moles, with little
if any local protection, would be given
local protection before the year
ended with the Covid 19 situation
being what it is this may delay
again my request is that this be
anticipation

By this time your MLRB
is committed with whatever outcome.
Henceforth may have gone into higher-
nation care must be taken not to
put them in danger population
numbers throughout the UK at
an alarming rate. The same may
be said of bats some species choose
trees rather than buildings. It is
their mating season at this time

II

They will cause birth in the spring
time. No time may be cut down unless
it is absolutely certain that
birds will not be put at risk.

These cut down should
be replaced as soon as possible!
Other wildlife found found
as in para 2. If work cuts
ahead it is likely to be in
the autumn, possibly after,
it should be considered what
might cut down during the
seasons of the date, time and
venue of the noise to be
avoided but it is unlikely that
I shall be able to attend.

Yours faithfully

PS Will houses be destroyed? This
should not be the case. They provide
protection and shelter for smaller
birds so too spiders and other
insects! What of ants? Is an
ecological/environmental impact
survey required?

PPS Is there anything of
archaeological interest on site?
