Subject: Re: Planning Application 12/01915/APP Amend Drainage Proposals to Include Bio...

Good Morning.

I am in receipt of the response from SEPA. With the greatest of respect, has anyone from SEPA visited this site recently to see at first hand the challenges faced by the Appellant? There are many mature trees and finished gardens and car parks now long established not forgetting the rise from the point of discharge from the house to the connection manhole. It appears that the Consultee is making a paper decision without familiarising themselves with the actual physical challenges of making this connection to the sewer on the site. It would be hoped that perhaps SEPA could be encouraged to have a representative attend the site meeting on Friday where an informed decision could be made by assessing the problems on the site rather than just dismiss the request from a desk in Aberdeen. Again, I should re-iterate, that this comment is made with the utmost respect but also to allow the Appellant the best possible hearing for these difficult circumstances he finds himself in.

regards

Colin
